Life Cycle of DS Project

Exploratory Data Analysis

improve the model

training with ML Algorithms

Statistics

Analysis of DATA

Descriptive stats

Summarizing the Data

Descriptive stats ←

Age = {12, 13, 14, 18, 20, 25}

pie

Average Age

Descriptive stats.

Statistics Defination :-

statistics is a Science of Collecting, organizing and analyzing the data

Data: It is a facts or pieces of informations.

Example: ① Ages of students in a class.

{ 24, 25, 26, 23, 28 } \Rightarrow Mean, Median, Mode

Standard deviation

② weights of student in class.

Statistics

Descriptive stats [Eda + FE]

① It consists of organizing and summarizing the data.

Inferential Stats.

Histogram

Bar chart

→ candle stick

Box plot

$x = \text{Height}$
 $y = \text{Weight}$
 (Height) (Weight)

$x \uparrow y \uparrow$

Inferential stats

It consists of collecting sample data and making conclusion about population data using some experiments.

[making conclusion] \rightarrow Hypothesis Testing.

~~university~~

university \rightarrow 500 people

[Class A]

[sample data] \Rightarrow [Age] \Rightarrow Average age of the entire university

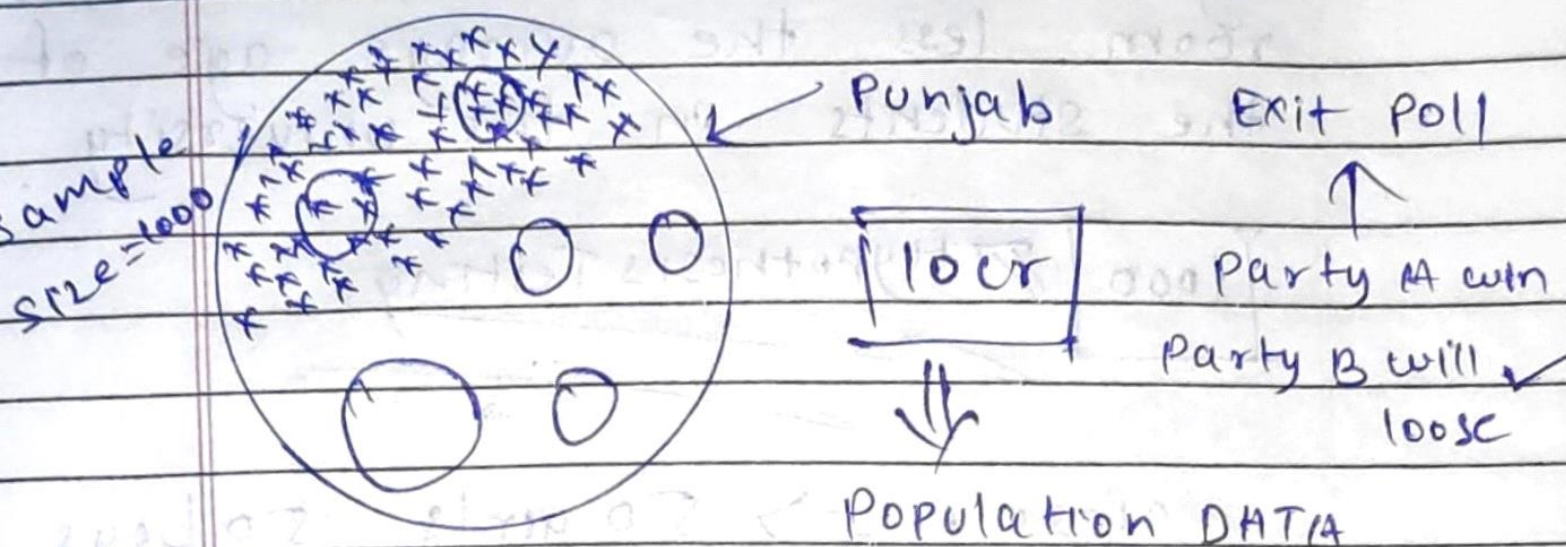

Hypothesis Testing

C.I \Rightarrow confidence Interval

P-value

- ① Z test
- ② t test
- ③ chisquare test
- ④ F test

Sample Data vs population Data

Eg:- lets say there are 20 classrooms in a university and you have collected the age of students in one classroom.

Ages = { 21, 20, 18, 34, 17, 24, 25, 26, 23, 22 }

weight { — — — — — }

Descriptive stats:-

what is the average age of students in the classroom?

Relation between Age & Gender

Inferential stats :- Are the average age of the students in the class-room less the average age of the students in the university

1000 // Hypothesis Testing

Class A \Rightarrow 50 girls 50 boys

choose a sample 95%

92%

↑
Sampling Techniques

Population (N)

sample (n)

① Simple Random Sampling :-

Every member of the population (N) has an equal chance of being selected for your sample (n)

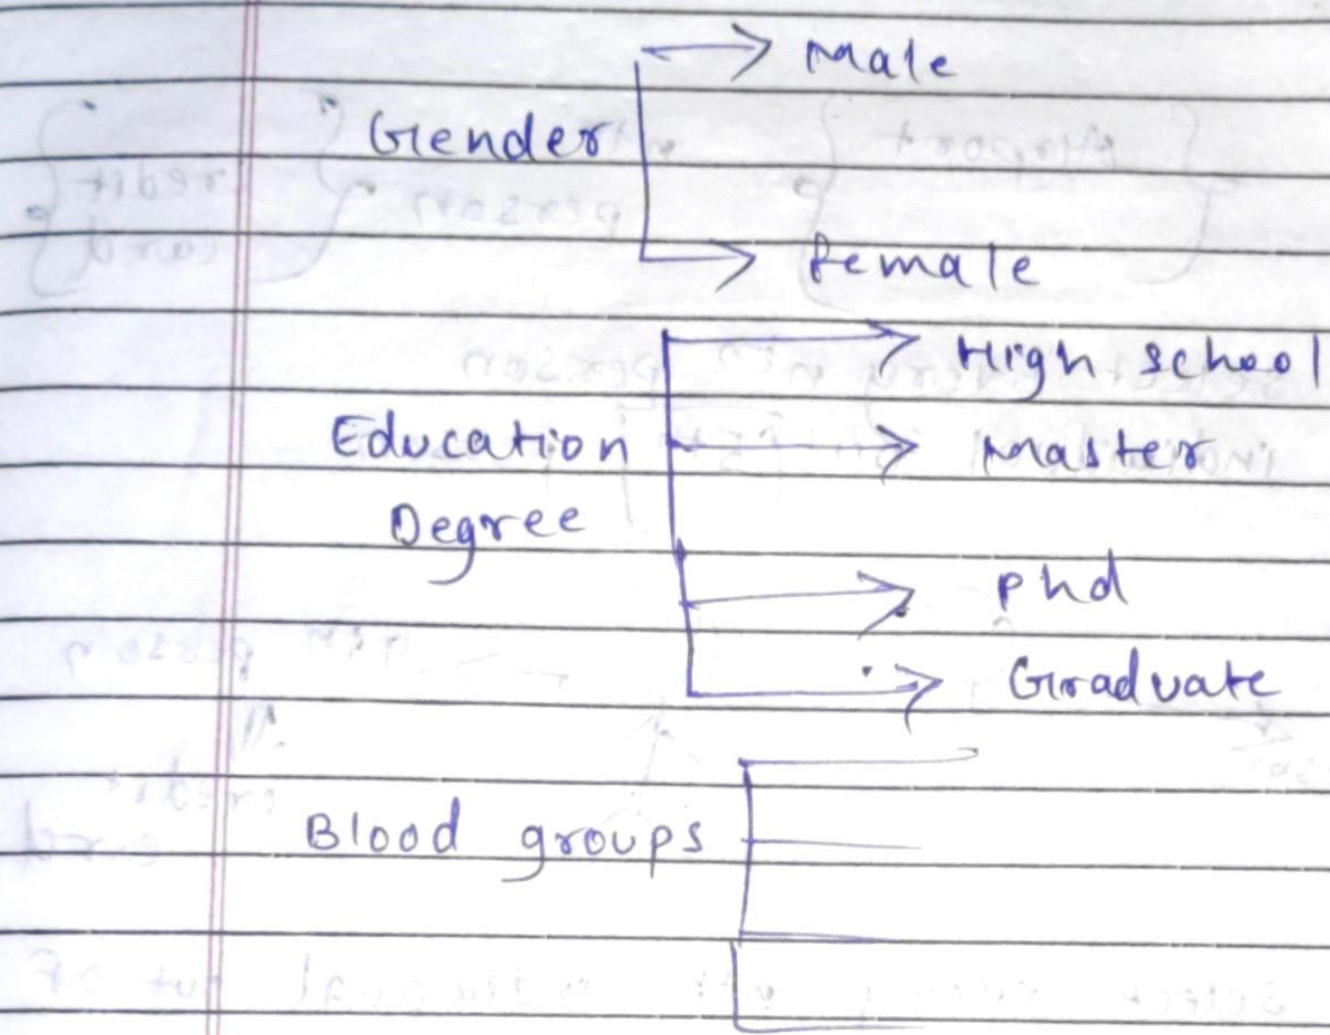

$n = 1000$

< 18

> 18

→ Random sampling

② stratified Sampling :-

Population

{ Exit }
{ Poll }

Not vote

Random Sampling

③ Systematic Sampling

{ Airport } n^{th} person { credit car

Select Every n^{th} person
individual but 5^{th} person

Select every n^{th} individual out of
Population (N)

④ Convenience Sampling - only those
who are interested in the survey
will only participate

{ Data Science Survey } → General
AI
Survey

inuron job for a
specific

↓
{ fill the form }

Examples :-

① Survey Regarding New Technology

convenience Sampling

② RBI Survey \Rightarrow women only [married women]

③ Credit card : stratified + Random sampling

④ Variable : Variable is a property that can take any values

Eg :- Age = 14

age = 25

age = 100

variables

Ages = [24, 25, 26, 27, 28, 29]

collection

Two Different types of variables:-

① Quantitative Variable \rightarrow measured Numerically { Mathematical operation }
Ex :- Age, weight, height, rainfall (cm)

② Qualitative Variable :
categorical variables { Based on some characteristics they are group together }
Eg :- Gender, Types of flower, Type of movies

Quantitative Variables

(1)

Discrete Variable
Eg: whole number

~~Continuous~~
Continuous Variable

↓
Fixed

(1) E.g: No. of Bank Account

{ 1, 2, 3, 4, 5 }

(2) No. of children: whole number

(3) pincode = fixed

(2) Continuous Variable:

~~Continuous~~ Continuous → Decimal value

Eg:

(1) Height, weight, ages, Rainfall, speed

Marital

→ married

→ Not married

⇓
categorical variable

Assessment

② what kind of variable is :

Marital status \rightarrow categorical variable

Movie duration \rightarrow continuous variable

Pincode \rightarrow Discrete variable

IQ \rightarrow Discrete variable

Pancard \rightarrow categorical variable
